

Children and Adult End of Life Care Strategy 2018 - 2021

Strategy on a page

Our vision for end of life care:

East Berkshire's vision for end of life care has been co-produced in partnership with our end of life care patient panel. The patient panel comprises local people, some facing their own end of life issues, or with lived experience of caring for others at the end of life. This co-design process has ensured that our vision is capturing what is really important to our residents.

We want every person who is dying to be seen as an individual with life yet to live. We want co-ordinated end of life care to support these individuals, their carers and families with compassion, dignity and respect.

Our five strategic priorities for end of life care:

Our five priorities overlap with and are interdependent of each other. Excellent end of life care can only be achieved through the delivery of all five priorities.
